I have previously discussed Concern with Supervision: Yes/No <b>YES</b>		Location of Concern 4101 Chem Prep	

Safety Concern : Operations from B371 were doing " tap and drain" operations in the B371 attic area (Hot Side) and brought a 55 Gal drum with the liquids from the "tap & drain" into the "cold" area/ Chem. Prep in B374 Rm.#4101, to drain the 55 Gallon drum into the berm. This is a "COLD area. There are NO CAAMS/SAAMS in this area at all!! This had a great potential for causing a radiological release of contamination (and infact did). and had the potential for releasing airborne contamination which could be an uptake take into the respiratory system and no one would know (NO CAAM/SAAMS) until their next Routine urine request

Recommendation  
That NO potentially "HOT" liquids are drained into ANY drains where there is not sufficient Radiological monitoring in place and the RCT's have checked out the drum and area.
